24/7 offices that fit your corporate vision and culture

NOX Building has undergone a complete transformation to become the office of tomorrow.

An open, warm, luminous and trend-setting environment designed to welcome and promote horizontal structures, creativity and round-the-clock socializing.

Flexible, 100% adaptable workspaces made with noble materials such as marble and wood and the latest advances in technology, well-being and sustainability.

NOX: more than just offices

The building's landmark status means it needs to be equipped with a comparable level of amenities. That's why its catalogue of services and amenities has also been revamped to create the perfect environment for personal and professional balance.

24-hour service

A warm welcome in the form of an always-open reception area, a large interactive video wall and access control managed through an app.

Services for always-on companies

NOX Building offers services that ensure that the facilities run smoothly.

Parking for all

The building's basements have spaces for cars and adapted and electric vehicles, as well as options for motorbikes, bicycles and scooters.

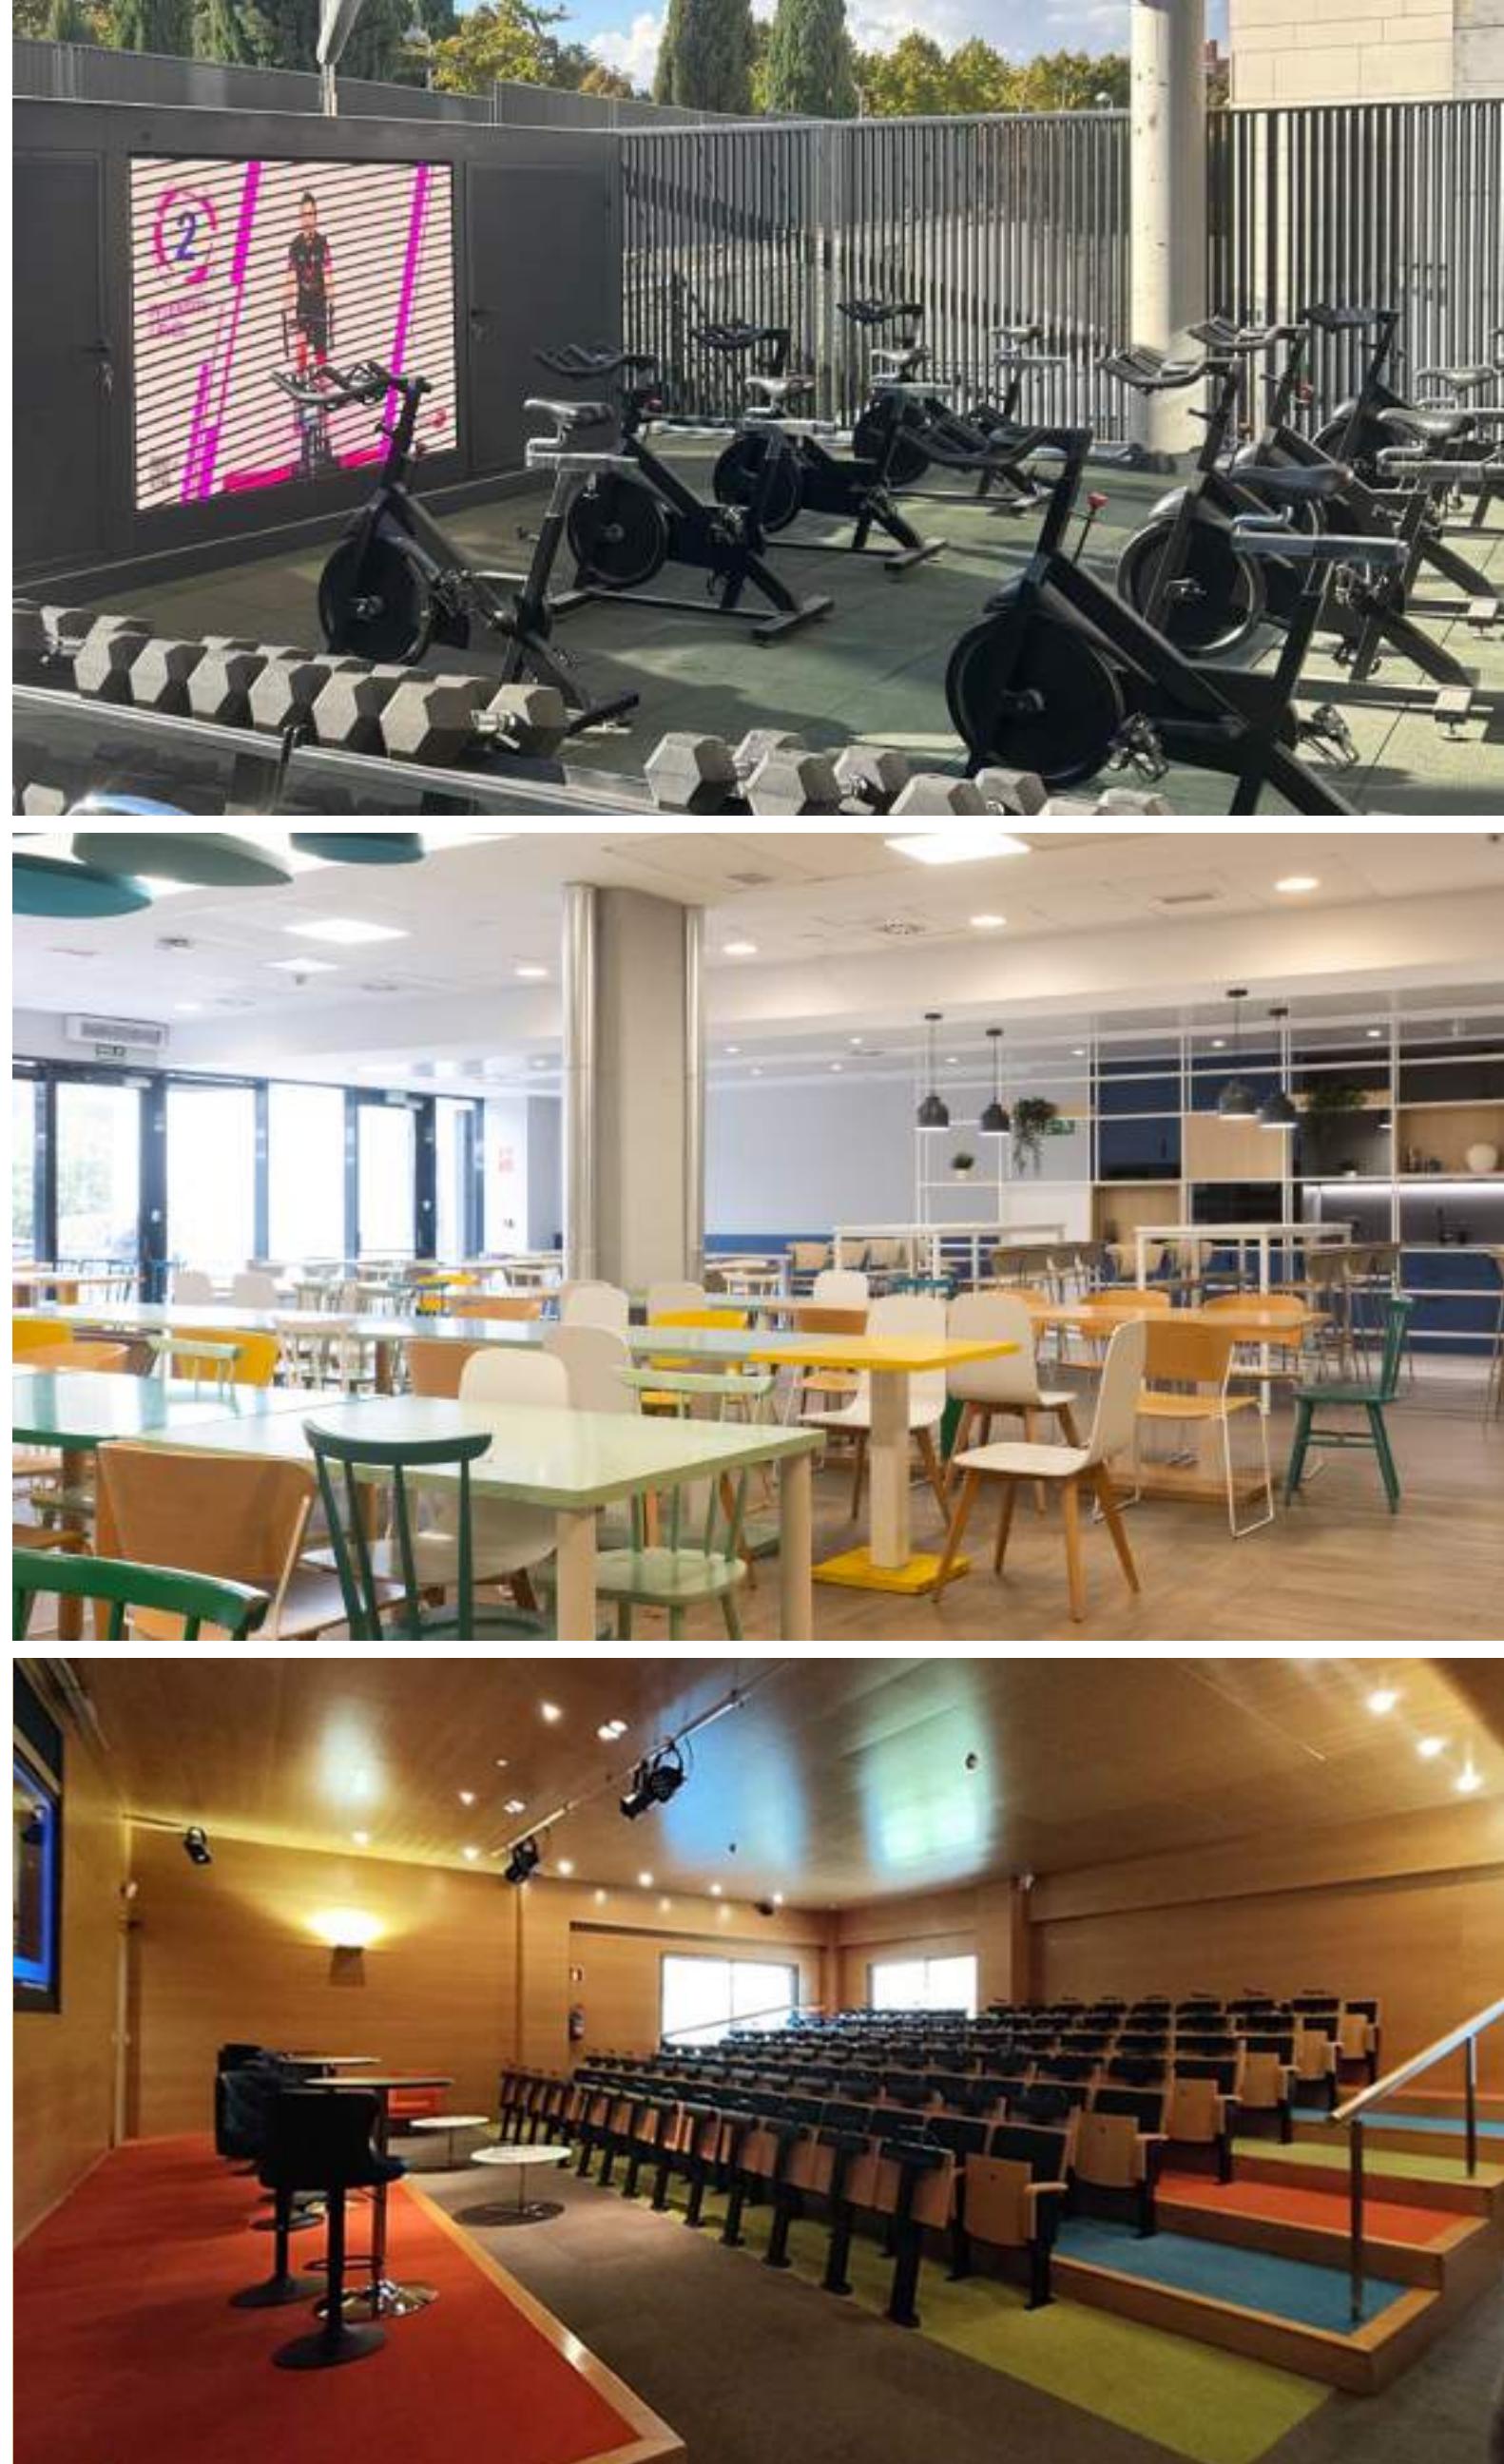

High connectivity

Tenants can benefit from ultra-fast Internet connection throughout the building based on a 10+ GB Ethernet connection.

Amenities

Communal areas conceived for your team's well-being and enjoyment.

Outdoor gym

A workout area designed by an expert, open 24/7 and includes room for supervised classes, workout machines, a running track and changing rooms.

Multifunctional cafeteria

Have a group meal or just a quick bite. Relax outside or grab a coffee to work into the night. Find the perfect option in the cafeteria's different areas and services.

Auditorium

A 120 sqm space with seating for 84 people, perfect for corporate activities, large presentations, training sessions and other events.

Amenities

Communal areas conceived for your team's well-being and enjoyment.

Meeting areas

The entrance hall will have open spaces where impromptu meetings can be held and visitors can be received without the need to go up to the office.

Loading and unloading area

NOX Building offers a fully operative loading dock and lockers.

Terraces and green areas

A space where work and enjoyment come together. Our office building has an exclusive terrace measuring over 200 sqm designed to offer moments of relaxation and well-being to all its tenants.

A unique setting with colourful gardens, palm trees and green areas, designed to create a pleasant atmosphere that encourages creativity and networking.

Work, connect and enjoy a space that inspires.

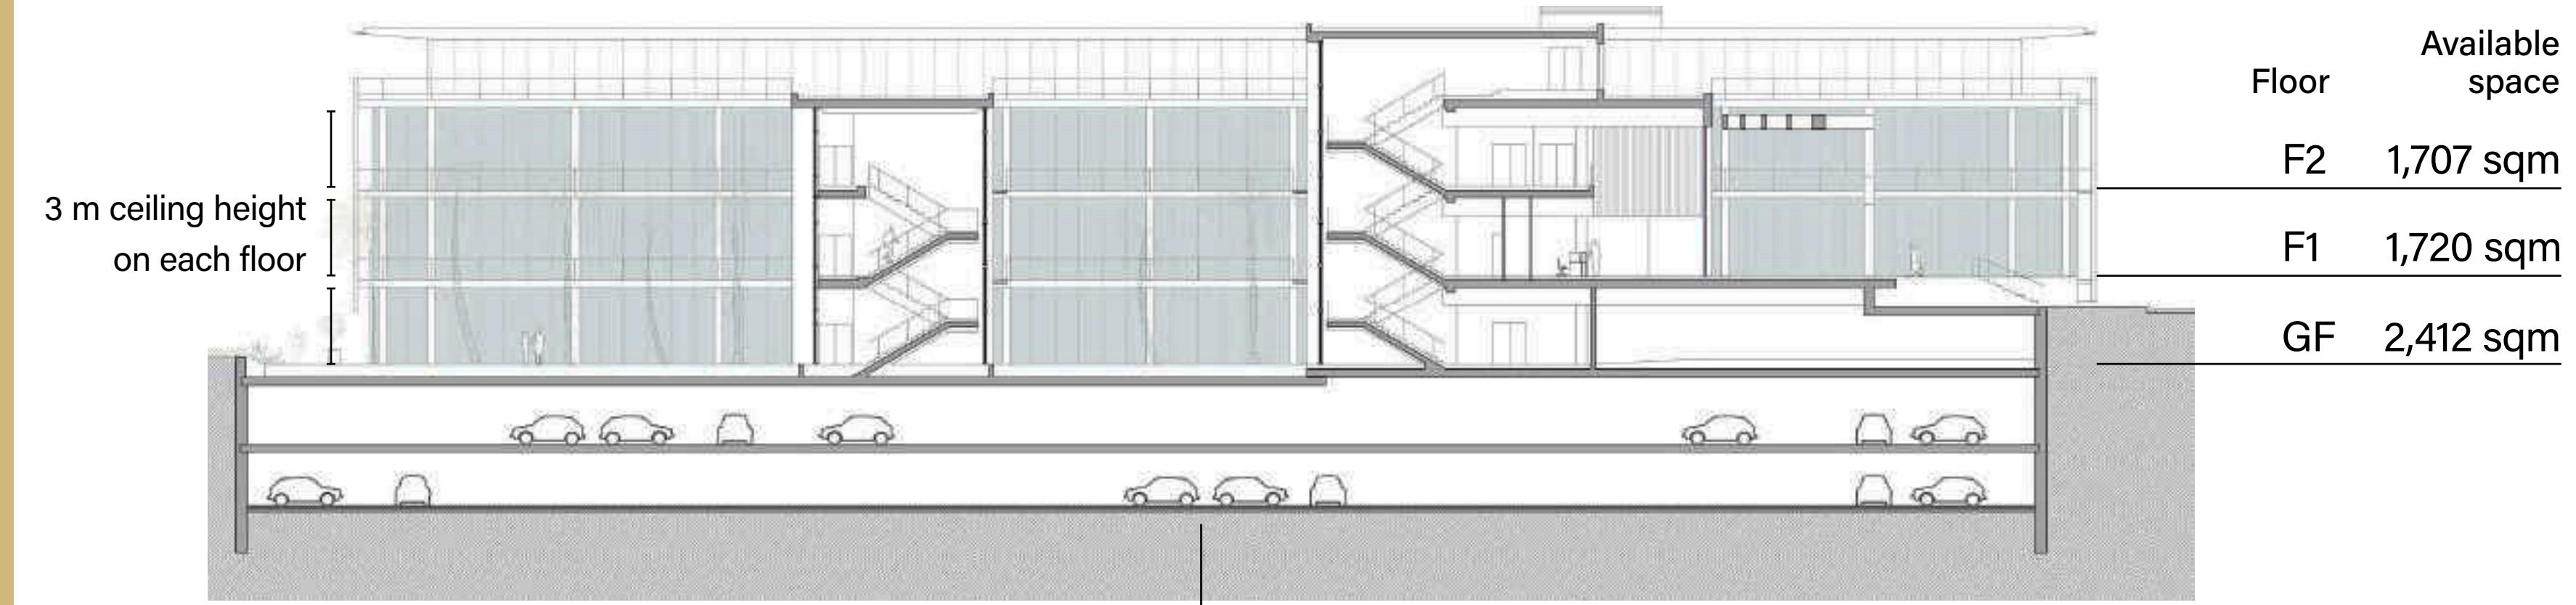

A building that works day and night to care for the environment

NOX Building also represents another approach to work in terms of well-being, efficiency and sustainability. Its refurbishing has gone beyond the strictly functional and aesthetic to focus on operational and environmental aspects, which have earned it the LEED Gold certification, one of the highest standards of the world's most famous green building rating system.

Enjoy a green building that also thinks of you

Delivered with suspended ceiling, LED lighting and raised floor.

A cutting-edge building full of interesting details

FAÇADE

The building has two types of envelope: a curtain wall in the office area to maximize natural light and views, and a ventilated limestone façade in all other areas.

The curtain wall is also surrounded by the building's second skin in the form of limestone slats, which allow as much natural light as possible to enter the building while reducing the heat and glare of direct sunlight. 3 m high viewing area on office floors and double-height ceiling in the entrance hall.

SECURITY

Interior security

A state-of-the-art computerized people access control system is in place in the lobby and at the entrances to the building from the car park.

Vehicle access control in underground car parks with barriers and card reading machines.

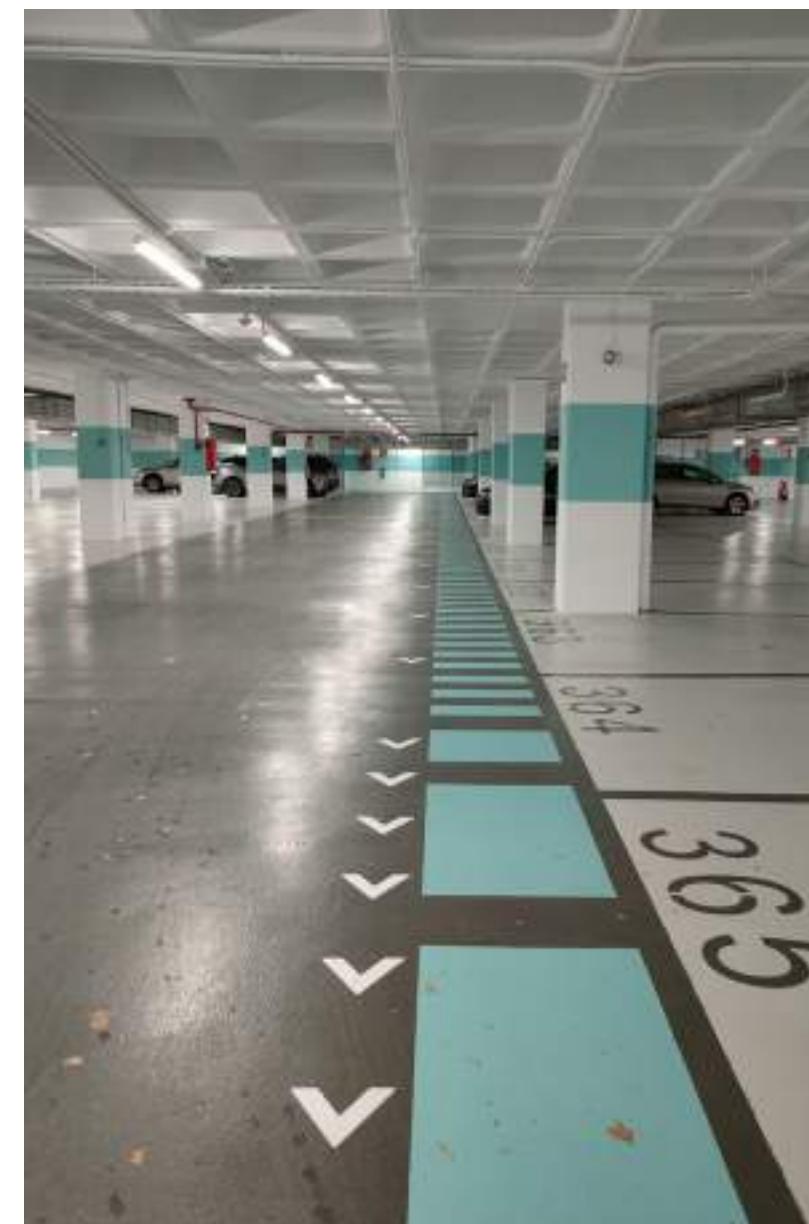

Intrusion detection system with volumetric motion sensors and magnetic contacts. A CCTV surveillance system at all building entrances with fixed video cameras, monitors and digital video recorders.

Fire protection

The detection and extinguishing systems include optical sensors in ceilings, raised floors and suspended ceilings, fire doors to maintain compartmentalization and a system of fire extinguishers and fire hydrant cabinets throughout the building, for which distances are maintained as required by regulations.

UNDERGROUND CAR PARKS

The car parks have been refurbished to their original state with regard to licensing and the space has been adapted in terms of finishes and lighting. A number of electric charging points have been installed for vehicles, scooters and bicycles.

The entire area is painted with polyurethane resin in different colours to create an innovative design that indicates the streets. The same design is applied on walls and columns with special attention to entrances and the reception areas.

The car park is distributed on two floors below ground level with a total of 403 parking spaces for cars, including 24 for electric vehicles and 11 for people with reduced mobility. In addition, 38 spaces have been

added for motorbikes, along with an area for electric bicycles and two areas for electric scooters. There are two accesses from the street level with two-way ramps. The building can be accessed from Avenida de San Luis and Calle del Pinar del Rey.

LIGHTING

Communal areas with energy-efficient luminaires with low-consumption LED technology for considerable economic savings.

The building makes incomparable use of natural light with a glazed façade, curtain walls throughout the building envelope and a ceiling height of 3 m.

ELECTRICAL INSTALLATION

Electrical supply is distributed to different secondary switchboards in office modules to ensure each one is independent.

The installation has several diesel-powered generators to supplement the power supply in the event of a power failure.

HEATING, VENTILATION AND AIR CONDITIONING

The heating and air-conditioning system has a primary air supply for indoor units in floor lobbies. Air flow from these units is channelled

to air vents in communal areas and through swirl diffusers in office modules. There is a return plenum in communal areas and the modules for rent are equipped with air vents in the suspended ceilings.

In the office modules, this system also includes 4-pipe fan coils on the façade perimeter.

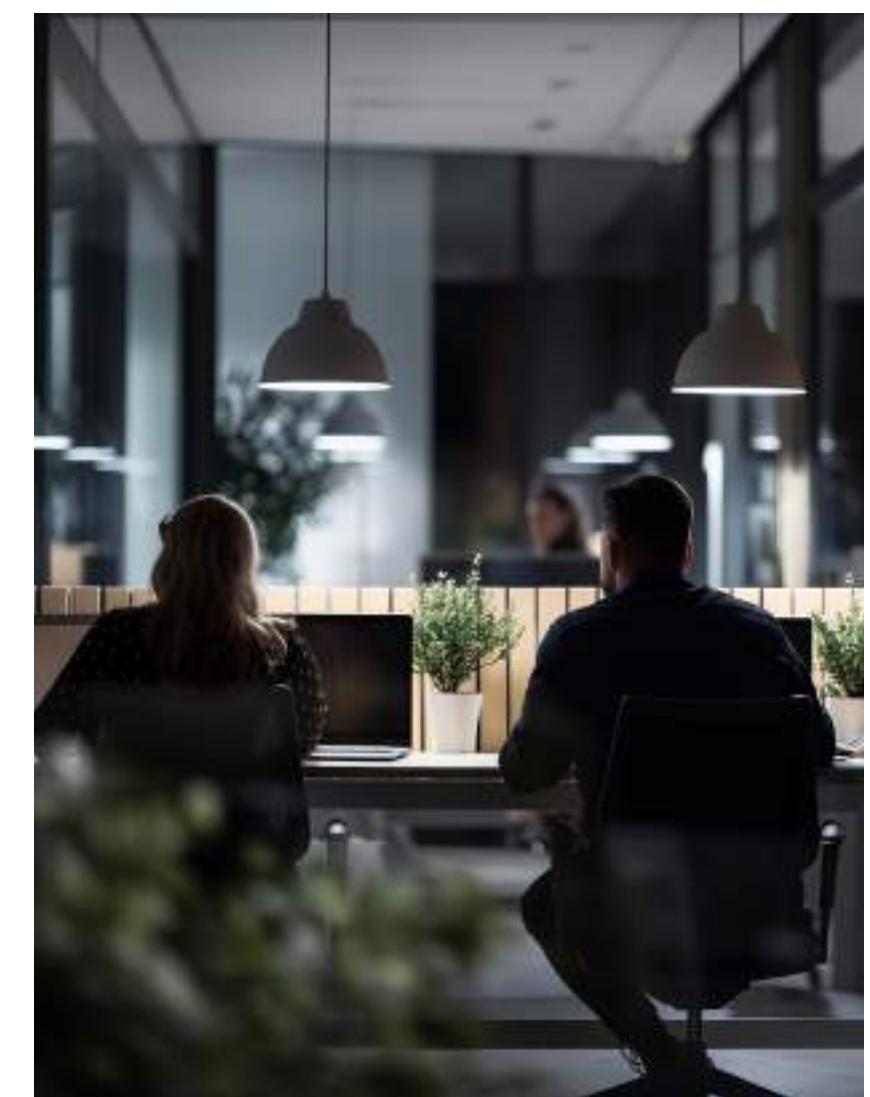

It is therefore a mixed system distributed in façade and internal areas to ensure tenant setup is as flexible as possible.

A centralized facility control system ensures high levels of comfort and reduces energy consumption.

TELECOMMUNICATIONS

High-speed connectivity available.

Optical fibre.

Take the first step towards your future
